

Lake Monitoring Protocols

Northeast Temperate Network (NETN)

Great Lakes Network (GLKN)

Bill Gawley, *Acadia NP Biologist*
Joan Elias, *GLKN Aquatic Ecologist*
Brian Mitchell, *NETN Coordinator*

GLKN Water Quality Monitoring – Inland Lakes Sampling Design

- Monitored annually, 3x/yr
- Index Lakes (N=33)
- Open water season, pref. when stratified

NETN Water Quality Monitoring – Lake and Pond Sampling Design

- Based on Acadia NP program
- Monitored monthly, May- October
- Annual & alternating monitoring at ACAD
- Annual monitoring at other NETN parks
- All accessible lakes > 1 acre (total of 23 in NETN) will be monitored (census)

9 Parks in GLKN

6 with Inland Lakes

- Apostle Islands NL
- Indiana Dunes NL
- Isle Royale NP
- Pictured Rocks NL
- Sleeping Bear Dunes
- Voyageurs NP

Waterbodies in GLKN Parks

Surface Area

	<1 ha	1-10 ha	10-100 ha	100- 1000 ha	>1000 ha
APIS	66	9	1		
INDU	49	9			
ISRO	189	60	22	4	1
PIRO	98	17	5	2	
SLBE	9	7	12	3	1
VOYA	237	268	27	4	4

Source - National Hydrography Database; Including beaver ponds, wetlands with open water

Selecting Index Lakes

Span gradients of:

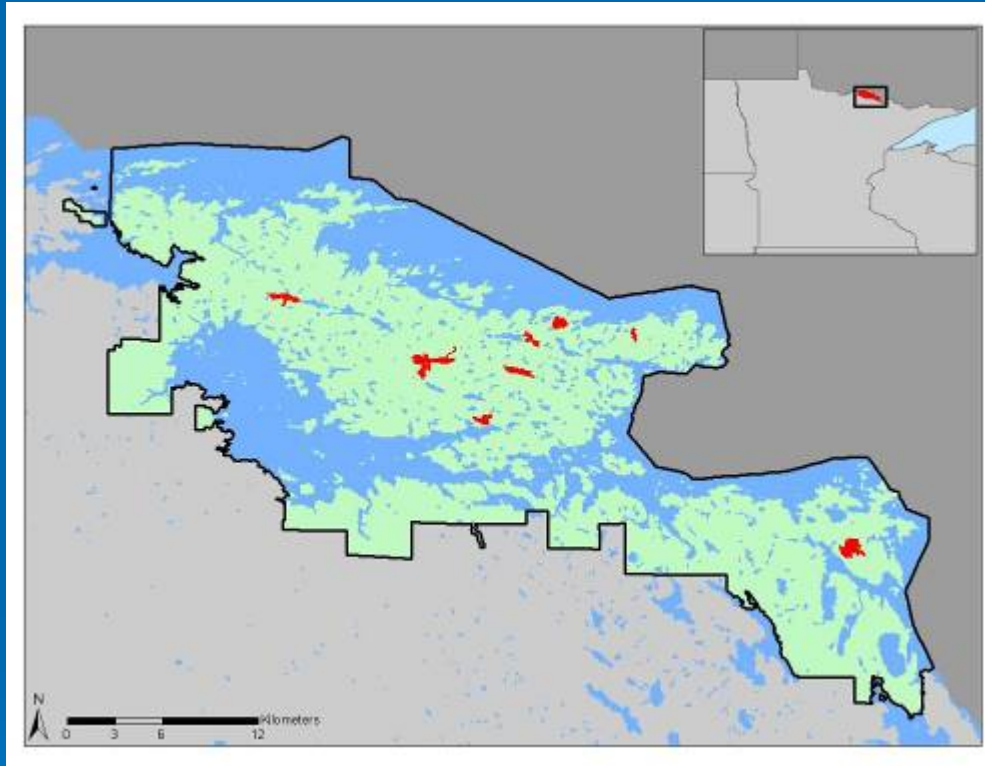

- Lake type (ordination of past WQ data)
- Basin morphometry
- Geographical distribution w/in park
- Visitor use
- Watershed size

Index Lakes Selected

- APIS – 4 lagoons (3 island, 1 mainland)
- INDU – 1
- ISRO – 9 (main island)
- PIRO – 5
- SLBE – 6 (1 island, 5 mainland)
- VOYA - 8

Index Lakes Selected for Voyageurs and Isle Royale National Parks, Showing Spatial Distribution

Index Lakes – Frequency Distribution of Zmax

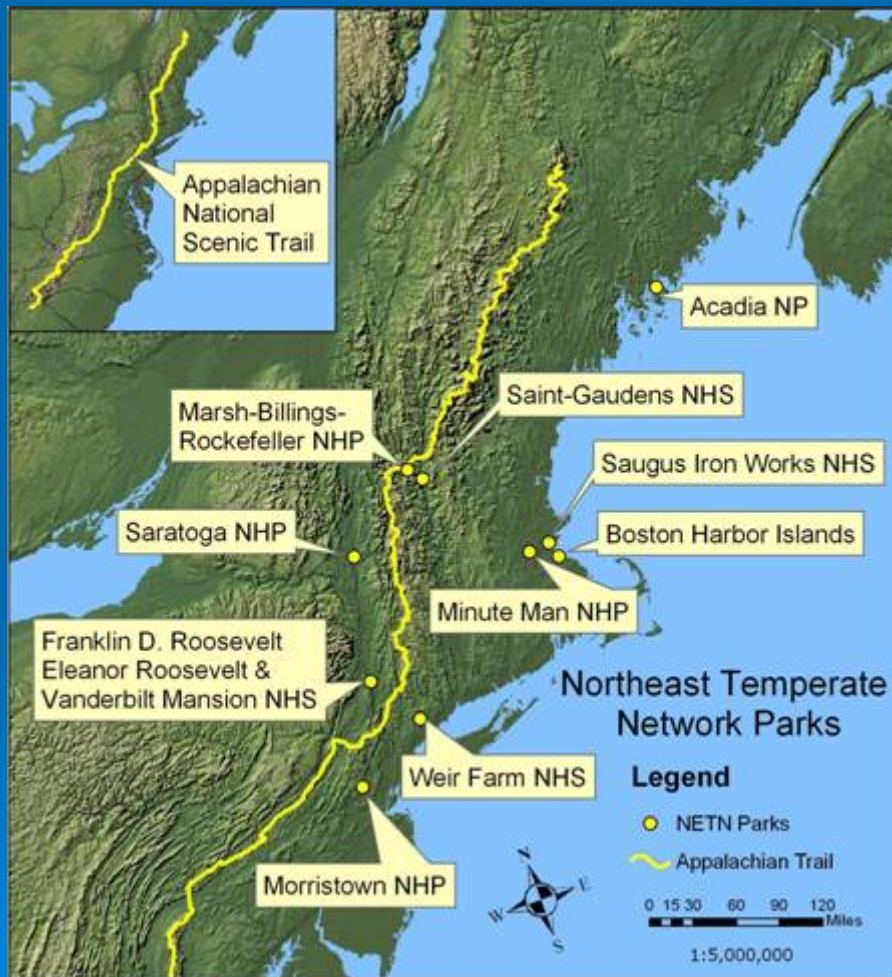

Most index lakes less than 50 ha; one large lake (ISRO)

10 Parks in NETN

7 with Lakes or Ponds

Monitoring Sites:

- ACAD: 13 lakes (>15 acres), 7 ponds (\geq 1- 15 acres)
- MABI: 1 pond
- WEFA: 1 pond
- SAGA: 1 pond

- Total of 20 lakes and ponds**
- Surface area range: 4.6 to 937 acres
 - Max. depth range 0.3 to 51 meters

Acadia National Park Lakes

(all on Mount Desert Island)

Parameters Measured

GLKN

- Core suite
 - Temp, DO, pH, EC25,
 - Clarity,
 - Water level
- Advanced suite
 - Cl, SO₄, Ca, K, Mg, Na, SiO₂
 - Alkalinity
 - DOC, TP, chl-a
 - TN, NO₂+NO₃-N, NH₄-N,

NETN

- Core suite
 - Temp, DO, pH, spCond
 - Secchi transparency (or Licor)
 - Water level
- Advanced suite
 - ANC, Apparent color
 - TP, TP_{diss}, PO₄ chl-a
 - TN, TN_{diss}, NO₂+NO₃-N, NO₂-N, NH₃-N,
- Spring/Fall Acidification
 - pH, eqpH, spCond, ANC, DOC, True color, Al, Ca, K, Mg, Na, NH₄, Cl, NO₃, SO₄, TN.

Core Suite Profiles

NETN

GLKN

Typical Late-Season Profile

GLKN – Range of Seasonal Means Across Parks

	Max	Min
Secchi (m)	7.8 ISRO	1.4 ISRO
Conductivity ($\mu\text{S}/\text{cm}$)	320 SLBE	7 PIRO
pH (SU)	8.72 ISRO	5.35 PIRO

Secchi Depth Transparency

NETN – Secchi Transparency at ACAD

Trophic State Index (TSI) 1996-2006

GLKN: 0-2 m integrated sample

NETN: 0-10 m integrated sample

GLKN – Range of Seasonal Means Across Parks

	Max	Min
Alkalinity (mg/L)	157 PIRO	≤ 4 PIRO, APIS, VOYA
Total P (ppb)	34 ISRO	4 VOYA
Total N (ppb)	818 SLBE	210 VOYA

GLKN 2007 TN:TP Results

all lakes P-limited

GLKN Range of Travel Time

from park hdqtrs

- ~20 min (one way)

SLBE – Tucker Lake

15 min drive to lake

5 min paddle to site

- ~4 hr (one way)

ISRO – Desor Lake

1.5 hr boat Lake Superior

30 min paddle to shore

1.5 hr portage to L. Desor

30 min paddle to site

Back-country Sampling

GLKN: Measuring Water Level

Measuring Water Level

- Install reference markers
 - Drill into bedrock
 - Pound rod 1.5m into sand
 - Nail in tree as back-up 1st year
- Using hand level and stadia rod
measure water level relative to marker

Example Water Level Notes

reference marker under jack pine

Photo from campsite

Photo from marker

campsite

Agnes Lake Reference Marker
UTM: 15T 5368392N 513742E

6-10-06

water level = - 1.20m

Reference marker on NW side of lake, NE of campsite - straight line distance 34.5 m from fire ring. Below large rock wall ~1.5 m away from water's edge beneath 10" dbh jack pine. Hike along shoreline to large jack pine. Reference marker is 400° from fire ring.

Pictures from campsite toward marker and marker toward campsite.

8-2-06

water level = - 1.305 m

NETN: Measuring Water Level

Oops!

Sonde QA/QC

- Calibrate daily, pre-mobilization
- Maintain a calibration log
- Check calibration pre-mobilization, several times/sampling round
- Develop calibration acceptance criteria
- Check bias with reference solutions
- AMS: 7 successive measurements, calculate S.D.

Calibration Acceptance Criteria

- Temperature $\pm 1.0^{\circ}\text{C}$
- Specific Conductivity $\pm 5\%$
- pH ± 0.05 standard unit
- Dissolved Oxygen $\pm 0.2 \text{ mg/L}$
or 10% saturation
- Depth 0.1m

Field Measurement QA/QC

Stabilization Criteria

- Temperature 0.2°C
- Specific Conductivity $\leq 100 \mu\text{S/cm}$: $< 5 \mu\text{S/cm}$
 $> 100 \mu\text{S/cm}$: $\pm 10\%$
- pH ± 0.2 standard unit
- Dissolved Oxygen conc. $\pm 0.5 \text{ mg/L}$
- Depth 0.1m

QA/QC Duplicates and Blanks

- Field duplicates $\geq 10\%$
 - acceptance criteria 10% RPD
- Lab duplicates $\sim 10\%$
 - acceptance criteria
 - chl-a, nutrients = 30%
 - other parameters = 15%
- Blanks
 - beginning and middle of season
 - each piece of sampling equipment

QA/QC – Checklists

Multiprobe

Minimum Detectable Difference

Trophic status parameters (TP, Chl-a, Secchi)

- Chl-a most variable
- Secchi least variable

Baseline = 10 yrs of Secchi data (1x/mo, summer)

Subsequent 20% change/yr, $\alpha=0.05$, power = 80%

>10 yrs required for TP and Chl-a

(Vermont Lay Monitoring Program, Schmeltzer et al. 1989)

MDD (continued)

Baseline = 10 yrs Secchi data (1x/mo, summer)

Subsequent 20% change/yr

$\alpha=0.10$, power = 90%

(Minn. Poll. Control Agency 2005; Heiskary & Lindbloom 1993)

MDD (continued)

Past Data from GLKN Parks

yrs to detect 20% change in DO; $\alpha = 0.1$, $1-\beta = .80$

Sampling 3x/yr, open water season (Host, unpubl. data)

Lake (Park)	Depth Stratum	Mean (% DO)	CV	# yrs
Florence (SLBE)	1-3 m	96.8	0.051	4
Manitou (SLBE)	1-3 m	95.3	0.072	5
Chapel (PIRO)	6-7 m	7.86	0.455	19

Sampling Frequency

Monthly sampling – open water season

Biggest Bang for the Buck

Minimum Detectable Differences for Acadia lakes (as % change)

Metric	Basis	Mean	SD/Mean	MDD 8 - / +	MDD 17 - / +
Stage height	11 lakes – 2006 ¹	0.90	0.42	53% / --%	36% / 56%

Ammonia	Insufficient data	--	--	--	--
Nitrite	Insufficient data	--	--	--	--
Nitrite + nitrate	Insufficient data	--	--	--	--

¹ Stage height was measured two to four times on 11 lakes in 2006.

² Secchi depth was measured two to four times on 10 lakes in 2007; an additional lake was excluded because the Secchi depth could not be measured during all attempts.

³ Specific conductivity was measured two to five times on 11 lakes in 2007; each measurement was the average of the lake profile.

⁴ pH was measured in lake profiles two or three times in 2006. SD/Mean was calculated on the hydrogen ion concentration, not the logarithmic pH scale.

⁵ E refers to epilimnion measurements, and H refers to hypolimnion measurements, for 10 lakes in 2007 with two to four profiles. N refers to unlayered lake measurements, for 3 lakes in 2007 with two to three profiles (two of these lakes had layering for part of the year).

⁶ For chlorophyll *a* and all water chemistry parameters, results for the core lakes were used. For several metrics, some or all measurements were below the laboratory detection limit, so these samples were excluded.
